Light Measurement Special

First Jaz-A application now available From multipurpose to dedicated device

Ocean Optics has just released it's first custom application for our modular Jaz spectrometer platform: JAZ-A-IRRAD. This application allows for calibrated absolute irradiance measurements without any need for an external computer.

[Read more about Jaz-A irradi >>>](#)

Products

Full spectral analysis with a simple handheld unit

For analysis of the complete spectrum for process, lab and field applications, we introduce the Jaz optical sensing suite. With its onboard microprocessor and unique features such as battery operation and Ethernet connectivity, Jaz is the ideal unit for full spectral analysis, including colour rendering.

[Read more about Jaz >>>](#)

Measure your LED colour easily and conveniently

The new ColorBUG system from Ocean Optics is an ingenious handheld device for testing colour and illuminance in studio, architectural and theatre applications. Perfect for lighting designers, photographers and technicians, colorBUG is no larger than a typical mobile phone and allows you to determine CIE colour values and illuminance easily and conveniently.

[Read more about ColorBUG >>>](#)

Fast analysis of displays with a new colorimeter

Ocean Optics also offers the Brontes colorimeter. With 5,500 colour measurements per second and 18,000 luminance measurements per second in burst mode, Brontes offers fast measurements, especially well suited for analysing displays.

OEM Solutions

Ocean Optics is known for providing specialized solutions for a broad range of OEM applications, including full support, service and quality, all ensured under the OEM developer program. Our OEM engineering and support teams work closely with your product developers to ensure a seamless transition from development to fulfilment.

Tradeshows

Come visit us at the tradeshow

Visit the conference sessions, where Marco Snickers will talk about the development of miniature spectroscopy. Since the development of miniature spectroscopy 15 years ago, many new applications once deemed too costly or impractical using conventional spectrometers were not only feasible, but practical. Whether it is monitoring the quality of our fruits or air quality during the Chinese Olympic games, spectroscopy is coming closer and closer to our daily lives. When will you have a spectrometer in your house or car?

Find out all about the latest developments in Photonics and visit us. For more information about visiting us at the show, contact us via info@oceanoptics.eu

Green Lighting Event 2009

24-26 March 2009 - Frankfurt, Germany

A number of well known events on light and optics will be combined under the umbrella title of GREEN LIGHTING EVENT. The Green Lighting Event hosts 4 TOP LEVEL EVENTS on light, devices, semiconductors and engineering. The 4 events come together at one main exhibition where companies will show their latest products and technique.

Fotonica Evenement

2 April 2009 - Nieuwegein, Netherlands

Fotonica Evenement is an event that present divers research workers from the field showing the latest status of their research and entrepreneurs showing their latest products and applications. The organizers, IOP Photonic Devices (carried out by SenterNovem and STW), Mikrocentrum and Photonics Cluster Netherlands, stimulate the relations between the research and the entrepreneurship with this event.

EuroLED 2009

2-4 June 2009 - Birmingham, United Kingdom

EuroLED is an annual and global solid-state lighting conference and exhibition. Currently in its sixth year, it has been established as Europe's premier event dedicated to solid-state lighting. The event offers a unique opportunity for global organisations to penetrate, expand and understand the European and global LED & solid-state lighting markets and continues to generate unprecedented industry participation from leading organizations.

Global and local support

Distributors

Ocean Optics has its sales offices in America, China, the Netherlands and Germany and additional local sales support in the UK, France and Austria.

Besides our local sales teams, we also have a large group of local distributors throughout the world. If you prefer to discuss your needs with a local representative, please find our distributors list on our website:
